COMPANY PROFILE

About Us

Founded in 2001, Fussen has been consistently dedicated to the research, development, and innovation of high-pressure water jet technology, with more than 20 years of technical expertise in high-pressure plunger pumps.

Through advanced manufacturing processes and strict quality control, Fussen delivers pumps that are high quality, durable, and reliable. Our equipment is widely applied in ship cleaning, industrial paint and rust removal, petrochemicals, and building maintenance, and has gained broad recognition in both domestic and international markets.

Professional

International

Brand-Oriented

Professional

Professional High-Pressure Cleaning Technology

Fussen develops advanced high-pressure pump technology that ensures efficiency, durability, and stability across diverse industrial applications.

The high-pressure pump, as the core component of a high-pressure cleaner, directly determines the overall efficiency and stability of the system. With deep insights into industry requirements, Fussen has developed a comprehensive range of professional cleaning solutions designed to meet diverse needs across different pressure levels, flow rates, and working environments.

Fussen's high-pressure plunger pumps are engineered with strict material selection, high-precision machining, and advanced sealing technology to ensure reliability and performance.

Fussen pumps are equipped with ceramic and alloy steel plungers to ensure reliable performance and durability. The ceramic plungers offer excellent wear and corrosion resistance with a smooth, low-friction surface that extends seal life, while the alloy steel plungers provide exceptional strength and impact resistance for high-pressure applications. Together with high-quality water and oil seals, the system maintains stable operation and long service life. For particularly demanding environments, Fussen also provides customized corrosion-resistant and high-temperature-resistant seal solutions. As a result, the pumps deliver reliable stability, superior efficiency, and extended durability under diverse operating conditions.

International

International Quality Standards and Worldwide Reach

Fussen is committed to delivering products that meet the highest international standards and are shipped to customers worldwide.

The company operates in full compliance with the ISO9001 quality management system, ensuring excellence throughout design, production, testing, and service. All products are CE certified and comply with international safety requirements. With outstanding quality and consistent reliability, Fussen's pumps are widely used across Europe, the Middle East, Southeast Asia, and South America. Through long-term partnerships and a proven record of performance, the company has earned the trust of customers around the globe.

Brand-Oriented

Creating Value with Water

Fussen's brand philosophy is built on the belief that water is not only a resource but also a force for creating value.

The company is committed to delivering high-quality pumps while advancing intelligent, efficient, and eco-friendly cleaning technology. Through continuous investment in research, development, and product optimization, Fussen leads the high-pressure water jet industry forward. Looking to the future, the company will continue to innovate and provide global customers with more professional, reliable, and sustainable cleaning solutions.

Cross Section View of High Pressure Plunger Pump

● High and low-pressure water seals

European imported water seal components are utilized, with both high and low-pressure seals being made of wear-resistant and temperature-resistant rubber-coated fabric material, capable of enduring long-term use and still performing excellently even in high-temperature environments of up to 65 degrees Celsius.

● One Way Valve

The valve cage is made from high-temperature resistant engineering plastic that does not easily expand, while the valve seat and valve cover are constructed from 316 stainless steel material. Special materials with resilience are chosen for the spring component to ensure a long-lasting service life of the valve body.

● Pump Head

The pump head is available in three different materials: brass, nickel-plated brass, and stainless steel. These materials exhibit excellent corrosion resistance. Additionally, the pump head channels are meticulously designed to ensure a high volumetric flow rate of water, reaching up to 99.8%.

● Ceramic plungers

Precision-machined robust ceramic plungers, suitable for high-load operations, exhibit outstanding wear resistance and strong corrosion resistance.

● Crankcase

The crankcase is subjected to precision casting and oxidation treatment, with its surface coated in high-strength black electrophoretic paint. In addition, the top of the crankcase is equipped with efficient heat dissipation fins, which not only effectively dissipate heat but also enhance its structural strength.

● Plunger connecting rod

Made of super alloy material, with exceptionally high load strength, it offers a longer lifespan, ensuring safe and stable operation.

● Oil Cap

The oil cap has been relocated to the rear of the crankcase for ease of adding lubricating oil while also preventing oil splashes and potential leaks.

● Oil level window

The oil level window located behind the pump makes checking the oil level more convenient.

● Crankshaft

To enhance the strength, lifespan, and durability of the crankshaft, we have employed precision forging techniques along with hardening treatments in its manufacturing process.

● Oil Seal

The oil seal is made from natural rubber material and is equipped with stainless steel springs to ensure sufficient tension force.
